“Basic Laws of Arithmetic”
(1893 & 1903)

Gottlob Frege (1848–1925)

“Basic Laws of Arithmetic”
(1893 & 1903)

对于一个科学工作者来说，最不幸的事情莫过于：当他的工作接近完成时，却发现那大厦的基础已经动摇。

— 《附录二》，1902

Bertrand Russell (1872–1970)

Bertrand Russell (1872–1970)

Bertrand Russell (1872–1970)

Bertrand Russell (1872–1970)

我们将集合理解为任何将我们思想中那些确定而彼此独立的对象放在一起而形成的聚合。

— *Georg Cantor* 《超穷数理论基础》

Georg Cantor (1845–1918)

我们将集合理解为任何将我们思想中那些确定而彼此独立的对象放在一起而形成的聚合。

— Georg Cantor 《超穷数理论基础》

Georg Cantor (1845–1918)

Theorem (概括原则)

*For any predicate $\psi(x)$, there is a **set** X :*

$$X = \{x \mid \psi(x)\}$$

Theorem (概括原则)

*For any predicate $\psi(x)$, there is a **set** X :*

$$X = \{x \mid \psi(x)\}.$$

Theorem (概括原则)

*For any predicate $\psi(x)$, there is a **set** X :*

$$X = \{x \mid \psi(x)\}.$$

Definition (Russell's Paradox)

$$\psi(x) \triangleq "x \notin x"$$

Theorem (概括原则)

For any predicate $\psi(x)$, there is a *set* X :

$$X = \{x \mid \psi(x)\}.$$

Definition (Russell's Paradox)

$$\psi(x) \triangleq "x \notin x"$$

$$R = \{x \mid x \notin x\}$$

Theorem (概括原则)

For any predicate $\psi(x)$, there is a *set* X :

$$X = \{x \mid \psi(x)\}.$$

Definition (Russell's Paradox)

$$\psi(x) \triangleq "x \notin x"$$

$$R = \{x \mid x \notin x\}$$

$$Q : R \in R ?$$

Q: 既然朴素集合论存在悖论，你是如何做作业的？

Theorem (Russell's Paradox)

$\{x \mid x \notin x\}$ is *not* a set.

Axiomatic Set Theory (ZFC)

Ernst Zermelo (1871–1953)

Abraham Fraenkel (1891–1965)

First-order Language for Sets $\mathcal{L}_{Set} = \{\in\}$

Parentheses: $(,)$

Variables: x, y, z, \dots

Connectives: $\wedge, \vee, \neg, \rightarrow, \leftrightarrow$

Quantifiers: \forall, \exists

Equality: $=$

Constants:

Functions:

Predicates: \in

Connectives: $\wedge, \vee, \neg, \rightarrow, \leftrightarrow$

Quantifiers: \forall, \exists

Equality: $=$

Constants:

Functions:

Predicates: \in

Everything we consider in \mathcal{L}_{Set} is a set.

Q : What is “ \in ”?

Q : What are “sets”?

Q : What is “ \in ”?

Q : What are “sets”?

We don't define them directly.

We only describe their properties in an **axiomatic** way.

- (1) To draw a straight line from any point to any point.
- (2) To extend a finite straight line continuously in a straight line.
- (3) To describe a circle with any center and radius.
- (4) That all right angles are equal to one another.
- (5) The parallel postulate.

Definition (\notin)

$$x \notin A \triangleq \neg(x \in A).$$

Definition (\notin)

$$x \notin A \triangleq \neg(x \in A).$$

Definition (\subseteq)

$$A \subseteq B \triangleq \forall x(x \in A \implies x \in B)$$

Axiom (Axiom of Extensionality)

If two sets have exactly the same members, then they are equal.

$$\forall A \forall B (\forall x (x \in A \iff x \in B) \implies A = B).$$

$$\forall A \forall B (A \subseteq B \wedge B \subseteq A \implies A = B).$$

Axiom (Axiom of Extensionality)

If two sets have exactly the same members, then they are equal.

$$\forall A \forall B (\forall x (x \in A \iff x \in B) \implies A = B).$$

$$\forall A \forall B (A \subseteq B \wedge B \subseteq A \implies A = B).$$

$$\forall A \forall B (A \subseteq B \wedge B \subseteq A \iff A = B).$$

Axiom (Empty Set Axiom)

There is a set having no members:

$$\exists B \forall x (x \notin B).$$

Axiom (Empty Set Axiom)

There is a set having no members:

$$\exists B \forall x (x \notin B).$$

Theorem (Uniqueness of Empty Set)

There is only one empty set.

Axiom (Empty Set Axiom)

There is a set having no members:

$$\exists B \forall x (x \notin B).$$

Theorem (Uniqueness of Empty Set)

There is only one empty set.

Definition (“ \emptyset ”)

$\emptyset \triangleq$ the **unique** empty set.

Axiom (Pairing Axiom)

For any sets x and y , there is a set having as members just x and y :

$$\forall x \forall y \exists B (\forall z (z \in B \iff z = x \vee z = y)).$$

Axiom (Paring Axiom)

For any sets x and y , there is a set having as members just x and y :

$$\forall x \forall y \exists B (\forall z (z \in B \iff z = x \vee z = y)).$$

Definition (“ $\{x, y\}$ ”)

$\{x, y\} \triangleq$ the **unique** set obtained by **paring** x and y .

Axiom (Paring Axiom)

For any sets x and y , there is a set having as members just x and y :

$$\forall x \forall y \exists B (\forall z (z \in B \iff z = x \vee z = y)).$$

Definition (“ $\{x, y\}$ ”)

$\{x, y\} \triangleq$ the **unique** set obtained by **paring** x and y .

Theorem

$$\{x, y\} = \{y, x\}.$$

Axiom (Paring Axiom)

For any sets x and y , there is a set having as members just x and y :

$$\forall x \forall y \exists B (\forall z (z \in B \iff z = x \vee z = y)).$$

Definition (“ $\{x, y\}$ ”)

$\{x, y\} \triangleq$ the **unique** set obtained by **paring** x and y .

Theorem

$$\{x, y\} = \{y, x\}.$$

Definition (“ $\{x\}$ ”)

$$\{x\} \triangleq \{x, x\}.$$

Axiom (Union Axiom (Simplified Version))

For any sets x and y , there is a set whose members are the elements belonging either to x or to y (or both):

$$\forall x \forall y \exists B (\forall z (z \in B \iff z \in x \vee z \in y)).$$

Axiom (Union Axiom (Simplified Version))

For any sets x and y , there is a set whose members are the elements belonging either to x or to y (or both):

$$\forall x \forall y \exists B (\forall z (z \in B \iff z \in x \vee z \in y)).$$

Definition (“ $x \cup y$ ”)

$x \cup y \triangleq$ the **unique** set obtained by **unioning** x and y .

Definition (“ $\{x, y\}$ ”)

$\{x, y\} \triangleq$ the **unique** set obtained by **paring** x and y .

Definition (“ $\{x\}$ ”)

$$\{x\} \triangleq \{x, x\}.$$

Definition (“ $\{x, y\}$ ”)

$\{x, y\} \triangleq$ the **unique** set obtained by **paring** x and y .

Definition (“ $\{x\}$ ”)

$$\{x\} \triangleq \{x, x\}.$$

Definition (“ $\{x, y, z\}$ ”)

$$\{x, y, z\} \triangleq \{x, y\} \cup \{z\}.$$

Definition (“ $\{x, y\}$ ”)

$\{x, y\} \triangleq$ the **unique** set obtained by **paring** x and y .

Definition (“ $\{x\}$ ”)

$$\{x\} \triangleq \{x, x\}.$$

Definition (“ $\{x, y, z\}$ ”)

$$\{x, y, z\} \triangleq \{x, y\} \cup \{z\}.$$

We can use **pairing** and **union** together to form **finite sets**.

Axiom (Union Axiom (Extended Version))

For any set A , there is a set B such that:

$\forall x (x \in B \iff x \text{ belongs to some member of } A).$

$$\forall x (x \in B \iff \exists y \in A (x \in y)).$$

Axiom (Union Axiom (Extended Version))

For any set A , there is a set B such that:

$\forall x (x \in B \iff x \text{ belongs to some member of } A).$

$$\forall x (x \in B \iff \exists y \in A (x \in y)).$$

Definition (“ $\bigcup A$ ” (Arbitrary Union))

$\bigcup A \triangleq$ the **unique** set obtained by **unioning** A .

Axiom (Union Axiom (Extended Version))

For any set A , there is a set B such that:

$\forall x (x \in B \iff x \text{ belongs to some member of } A).$

$$\forall x (x \in B \iff \exists y \in A (x \in y)).$$

Definition (“ $\bigcup A$ ” (Arbitrary Union))

$\bigcup A \triangleq$ the **unique** set obtained by **unioning** A .

Theorem

$$\bigcup \{x, y\} = x \cup y.$$

Axiom (Union Axiom (Extended Version))

For any set A , there is a set B such that:

$\forall x (x \in B \iff x \text{ belongs to some member of } A).$

$$\forall x (x \in B \iff \exists y \in A (x \in y)).$$

Definition (“ $\bigcup A$ ” (Arbitrary Union))

$\bigcup A \triangleq$ the **unique** set obtained by **unioning** A .

Theorem

$$\bigcup \{x, y\} = x \cup y.$$

Theorem

$$\bigcup \emptyset = \emptyset.$$

Axiom (Replacement Axioms (Simplified Version: Subset Axioms; Separation Axioms))

Let ψ be a predicate. For any set u , there is a set B which is a subset of u such that each element x of B satisfies $\psi(x)$:

$$\forall u \exists B (\forall x (x \in B \iff x \in u \wedge \psi(x))).$$

Definition (“ $\{x \in u \mid \psi(x)\}$ ”)

$\{x \in u \mid \psi(x)\} \triangleq$ the **unique** set obtained by **separating** from u with ψ .

Axiom (Replacement Axioms (Simplified Version: Subset Axioms; Separation Axioms))

Let ψ be a predicate. For any set u , there is a set B which is a subset of u such that each element x of B satisfies $\psi(x)$:

$$\forall u \exists B (\forall x (x \in B \iff x \in u \wedge \psi(x))).$$

Definition (“ $\{x \in u \mid \psi(x)\}$ ”)

$\{x \in u \mid \psi(x)\} \triangleq$ the **unique** set obtained by **separating** from u with ψ .

Definition (“ $u \cap v$ ”)

$$u \cap v \triangleq \{x \in u \mid x \in v\}.$$

Theorem (“ $\bigcap A$ ” (Arbitrary Intersection))

For any nonempty set A , there is a unique set B such that

$\forall x (x \in B \iff x \text{ belongs to every member of } A).$

$$\forall x (x \in B \iff \forall y \in A (x \in y)).$$

Theorem (“ $\bigcap A$ ” (Arbitrary Intersection))

For any nonempty set A , there is a unique set B such that

$$\forall x (x \in B \iff x \text{ belongs to every member of } A).$$

$$\forall x (x \in B \iff \forall y \in A (x \in y)).$$

Proof.

Let c be a fixed member of A .

Theorem (“ $\bigcap A$ ” (Arbitrary Intersection))

For any nonempty set A , there is a unique set B such that

$$\forall x (x \in B \iff x \text{ belongs to every member of } A).$$

$$\forall x (x \in B \iff \forall y \in A (x \in y)).$$

Proof.

Let c be a fixed member of A .

$$\bigcap A \triangleq \{x \in c \mid x \text{ belongs to every other member of } A\}.$$

Theorem (“ $\bigcap A$ ” (Arbitrary Intersection))

For any nonempty set A , there is a unique set B such that

$$\forall x (x \in B \iff x \text{ belongs to every member of } A).$$

$$\forall x (x \in B \iff \forall y \in A (x \in y)).$$

Proof.

Let c be a fixed member of A .

$$\bigcap A \triangleq \{x \in c \mid x \text{ belongs to every other member of } A\}.$$

“ $\bigcap \emptyset$ ”

$\bigcap \emptyset$ is *not* a set.

Theorem (No Universal Set)

There is no universal set.

$$\nexists B(\forall x(x \in B)).$$

Theorem (No Universal Set)

There is no universal set.

$$\nexists B(\forall x(x \in B)).$$

Proof.

For any set A , we construct a set not in A .

Theorem (No Universal Set)

There is no universal set.

$$\nexists B(\forall x(x \in B)).$$

Proof.

For any set A , we construct a set not in A .

$$B = \{x \in A \mid x \notin x\}$$

Theorem (No Universal Set)

There is no universal set.

$$\nexists B(\forall x(x \in B)).$$

Proof.

For any set A , we construct a set not in A .

$$B = \{x \in A \mid x \notin x\}$$

$$B \in B \iff B \in A \wedge B \notin B$$

Theorem (No Universal Set)

There is no universal set.

$$\nexists B (\forall x (x \in B)).$$

Proof.

For any set A , we construct a set not in A .

$$B = \{x \in A \mid x \notin x\}$$

$$B \in B \iff B \in A \wedge B \notin B$$

$$\boxed{B \notin A}$$

Theorem (No Universal Set)

There is no universal set.

$$\nexists B (\forall x (x \in B)).$$

Proof.

For any set A , we construct a set not in A .

$$B = \{x \in A \mid x \notin x\}$$

$$B \in B \iff B \in A \wedge B \notin B$$

$$\boxed{B \notin A}$$

$$B \in A \implies (B \in B \iff B \notin B)$$

Definition (“ $u \setminus v$ ” (Relative Complement))

$$u \setminus v \triangleq \{x \in u \mid x \notin v\}.$$

Definition (“ $u \setminus v$ ” (Relative Complement))

$$u \setminus v \triangleq \{x \in u \mid x \notin v\}.$$

Theorem (No “Absolute Complement”)

*For any set B , the following is **not** a set:*

$$\{x \mid x \notin B\}.$$

Definition (“ $u \setminus v$ ” (Relative Complement))

$$u \setminus v \triangleq \{x \in u \mid x \notin v\}.$$

Theorem (No “Absolute Complement”)

*For any set B , the following is **not** a set:*

$$\{x \mid x \notin B\}.$$

Proof.

By Contradiction.

Definition (“ $u \setminus v$ ” (Relative Complement))

$$u \setminus v \triangleq \{x \in u \mid x \notin v\}.$$

Theorem (No “Absolute Complement”)

*For any set B , the following is **not** a set:*

$$\{x \mid x \notin B\}.$$

Proof.

By Contradiction.

$\{x \mid x \notin B\} \cup B$ would be a universal set.

Definition (“ $u \setminus v$ ” (Relative Complement))

$$u \setminus v \triangleq \{x \in u \mid x \notin v\}.$$

Theorem (No “Absolute Complement”)

For any set B , the following is *not* a set:

$$\{x \mid x \notin B\}.$$

Proof.

By Contradiction.

$\{x \mid x \notin B\} \cup B$ would be a universal set.

We can never look for objects “not in B ” *unless we know where to start looking.*
— UD (Chapter 6; Page 64)

Axiom (Power Set Axiom)

For any set A , there is a set whose members are the subsets of A :

$$\forall A \exists B \forall x (x \in B \iff x \subseteq A).$$

Axiom (Power Set Axiom)

For any set A , there is a set whose members are the subsets of A :

$$\forall A \exists B \forall x (x \in B \iff x \subseteq A).$$

Definition (“ $\mathcal{P}(A)$ ”)

$\mathcal{P}(A) \triangleq$ the **unique** power set of A .

Axiom (Power Set Axiom)

For any set A , there is a set whose members are the subsets of A :

$$\forall A \exists B \forall x (x \in B \iff x \subseteq A).$$

Definition (“ $\mathcal{P}(A)$ ”)

$\mathcal{P}(A) \triangleq$ the **unique** power set of A .

The is *not* correct!

$$\mathcal{P}(A) \triangleq \{x \mid x \subseteq A\}$$

Set Operations (I)

\cap \cup \setminus

Theorem 7.4. Let X denote a set, and A, B , and C denote subsets of X . Then

1. $\emptyset \subseteq A$ and $A \subseteq A$.
2. $(A^c)^c = A$.
3. $A \cup \emptyset = A$.
4. $A \cap \emptyset = \emptyset$.
5. $A \cap A = A$.
6. $A \cup A = A$.
7. $A \cap B = B \cap A$. (Commutative property)
8. $A \cup B = B \cup A$. (Commutative property)
9. $(A \cup B) \cup C = A \cup (B \cup C)$. (Associative property)
10. $(A \cap B) \cap C = A \cap (B \cap C)$. (Associative property)
11. $A \cap B \subseteq A$.
12. $A \subseteq A \cup B$.
13. $A \cup (B \cap C) = (A \cup B) \cap (A \cup C)$. (Distributive property)
14. $A \cap (B \cup C) = (A \cap B) \cup (A \cap C)$. (Distributive property)
15. $X \setminus (A \cup B) = (X \setminus A) \cap (X \setminus B)$. (DeMorgan's law)
(When X is the universe we also write $(A \cup B)^c = A^c \cap B^c$.)
16. $X \setminus (A \cap B) = (X \setminus A) \cup (X \setminus B)$. (DeMorgan's law)
(When X is the universe we also write $(A \cap B)^c = A^c \cup B^c$.)
17. $A \setminus B = A \cap B^c$.
18. $A \subseteq B$ if and only if $(X \setminus B) \subseteq (X \setminus A)$.
(When X is the universe we also write $A \subseteq B$ if and only if $B^c \subseteq A^c$.)
19. $A \subseteq C$ and $B \subseteq C$ if and only if $A \cup B \subseteq C$.
20. $C \subseteq A$ and $C \subseteq B$ if and only if $C \subseteq A \cap B$.
21. $A \cup B = A$ if and only if $B \subseteq A$.
22. $A \cap B = B$ if and only if $B \subseteq A$.

Theorem (Distributive Property (Theorem 7.4 (13)))

$$A \cup (B \cap C) = (A \cup B) \cap (A \cup C)$$

Theorem (Distributive Property (Theorem 7.4 (13)))

$$A \cup (B \cap C) = (A \cup B) \cap (A \cup C)$$

Proof.

If $x \in A \cup (B \cap C)$, then $x \in A$ or $x \in B \cap C$. Suppose first that $x \in A$. Then $x \in A \cup B$ and $x \in A \cup C$. In this first case, we see that $x \in (A \cup B) \cap (A \cup C)$. Now suppose that $x \in B \cap C$. Then $x \in B$ and $x \in C$. Since $x \in B$, we see that $x \in A \cup B$. Since we also have $x \in C$, we see that $x \in A \cup C$. Therefore, $x \in (A \cup B) \cap (A \cup C)$ in this case as well. In either case $x \in (A \cup B) \cap (A \cup C)$ and we may conclude that $A \cup (B \cap C) \subseteq (A \cup B) \cap (A \cup C)$.

To complete the proof, we must now show that $(A \cup B) \cap (A \cup C) \subseteq A \cup (B \cap C)$. So if $x \in (A \cup B) \cap (A \cup C)$, then $x \in A \cup B$ and $x \in A \cup C$. It is, once again, helpful to break this into two cases, since we know that either $x \in A$ or $x \notin A$. Now if $x \in A$, then $x \in A \cup (B \cap C)$. If $x \notin A$, then the fact that $x \in A \cup B$ implies that x must be in B . Similarly, the fact that $x \in A \cup C$ implies that x must be in C . Therefore, $x \in B \cap C$. Hence $x \in A \cup (B \cap C)$. In either case $x \in A \cup (B \cap C)$ and we may conclude that $(A \cup B) \cap (A \cup C) \subseteq A \cup (B \cap C)$.

Since we proved containment in both directions we may conclude that the two sets are equal. ■

Theorem (Distributive Property (Theorem 7.4 (13)))

$$A \cup (B \cap C) = (A \cup B) \cap (A \cup C)$$

Proof.

If $x \in A \cup (B \cap C)$, then $x \in A$ or $x \in B \cap C$. Suppose first that $x \in A$. Then $x \in A \cup B$ and $x \in A \cup C$. In this first case, we see that $x \in (A \cup B) \cap (A \cup C)$. Now suppose that $x \in B \cap C$. Then $x \in B$ and $x \in C$. Since $x \in B$, we see that $x \in A \cup B$. Since we also have $x \in C$, we see that $x \in A \cup C$. Therefore, $x \in (A \cup B) \cap (A \cup C)$ in this case as well. In either case $x \in (A \cup B) \cap (A \cup C)$ and we may conclude that $A \cup (B \cap C) \subseteq (A \cup B) \cap (A \cup C)$.

To complete the proof, we must now show that $(A \cup B) \cap (A \cup C) \subseteq A \cup (B \cap C)$. So if $x \in (A \cup B) \cap (A \cup C)$, then $x \in A \cup B$ and $x \in A \cup C$. It is, once again, helpful to break this into two cases, since we know that either $x \in A$ or $x \notin A$. Now if $x \in A$, then $x \in A \cup (B \cap C)$. If $x \notin A$, then the fact that $x \in A \cup B$ implies that x must be in B . Similarly, the fact that $x \in A \cup C$ implies that x must be in C . Therefore, $x \in B \cap C$. Hence $x \in A \cup (B \cap C)$. In either case $x \in A \cup (B \cap C)$ and we may conclude that $(A \cup B) \cap (A \cup C) \subseteq A \cup (B \cap C)$.

Since we proved containment in both directions we may conclude that the two sets are equal. ■

Theorem (DeMorgan's Law (Theorem 7.4 (15)))

Let X denote a set, and $A, B \subseteq X$.

$$X \setminus (A \cup B) = (X \setminus A) \cap (X \setminus B)$$

Theorem (DeMorgan's Law (Theorem 7.4 (15)))

Let X denote a set, and $A, B \subseteq X$.

$$X \setminus (A \cup B) = (X \setminus A) \cap (X \setminus B)$$

$$Q : A, B \subseteq X?$$

Theorem (DeMorgan's Law)

Let A, B, C be three sets.

$$C \setminus (A \cup B) = (C \setminus A) \cap (C \setminus B)$$

Set Operations (II)

\cap \cup

$$\bigcup_{j=1}^n A_j \triangleq A_1 \cup A_2 \cup \cdots \cup A_n$$

$$\bigcap_{j=1}^n A_j \triangleq A_1 \cap A_2 \cap \cdots \cap A_n$$

$$\bigcup_{j=1}^n A_j \triangleq A_1 \cup A_2 \cup \cdots \cup A_n$$

$$\bigcap_{j=1}^n A_j \triangleq A_1 \cap A_2 \cap \cdots \cap A_n$$

$$\bigcup_{j=1}^{\infty} A_j \triangleq A_1 \cup A_2 \cup \cdots$$

$$\bigcap_{j=1}^{\infty} A_j \triangleq A_1 \cap A_2 \cap \cdots$$

$$\bigcup_{j=1}^n A_j \triangleq A_1 \cup A_2 \cup \cdots \cup A_n$$

$$\bigcap_{j=1}^n A_j \triangleq A_1 \cap A_2 \cap \cdots \cap A_n$$

$$\begin{aligned} A &= \mathbb{R} \setminus \bigcap_{n \in \mathbb{Z}^+} (\mathbb{R} \setminus X_n) \\ &= \mathbb{R} \setminus \left(\mathbb{R} \setminus \bigcup_{n \in \mathbb{Z}^+} X_n \right) \end{aligned}$$

DeMorgan's Law (UD Problem 8.14)

$$A = \mathbb{R} \setminus \bigcap_{n \in \mathbb{Z}^+} (\mathbb{R} \setminus \{-n, -n+1, \dots, 0, \dots, n-1, n\})$$

$$X_n = \{-n, -n+1, \dots, 0, \dots, n-1, n\}$$

$$\begin{aligned} A &= \mathbb{R} \setminus \bigcap_{n \in \mathbb{Z}^+} (\mathbb{R} \setminus X_n) \\ &= \mathbb{R} \setminus \left(\mathbb{R} \setminus \bigcup_{n \in \mathbb{Z}^+} X_n \right) \\ &= \mathbb{R} \setminus (\mathbb{R} \setminus \mathbb{Z}) \end{aligned}$$

DeMorgan's Law (UD Problem 8.14)

$$A = \mathbb{R} \setminus \bigcap_{n \in \mathbb{Z}^+} (\mathbb{R} \setminus \{-n, -n+1, \dots, 0, \dots, n-1, n\})$$

$$X_n = \{-n, -n+1, \dots, 0, \dots, n-1, n\}$$

$$\begin{aligned} A &= \mathbb{R} \setminus \bigcap_{n \in \mathbb{Z}^+} (\mathbb{R} \setminus X_n) \\ &= \mathbb{R} \setminus \left(\mathbb{R} \setminus \bigcup_{n \in \mathbb{Z}^+} X_n \right) \\ &= \mathbb{R} \setminus (\mathbb{R} \setminus \mathbb{Z}) \\ &= \mathbb{Z} \end{aligned}$$

Set Operations (III)

$$\mathcal{P}(X)$$

$$S \in \mathcal{P}(X) \iff S \subseteq X$$

Prove that for any set S :

$$\{\emptyset, \{\emptyset\}\} \in \mathcal{P}(\mathcal{P}(\mathcal{P}(S)))$$

Proof.

Prove that for any set S :

$$\{\emptyset, \{\emptyset\}\} \in \mathcal{P}(\mathcal{P}(\mathcal{P}(S)))$$

Proof.

$$\{\emptyset, \{\emptyset\}\} \in \mathcal{P}(\mathcal{P}(\mathcal{P}(S))) \iff \{\emptyset, \{\emptyset\}\} \subseteq \mathcal{P}(\mathcal{P}(S))$$

Prove that for any set S :

$$\{\emptyset, \{\emptyset\}\} \in \mathcal{P}(\mathcal{P}(\mathcal{P}(S)))$$

Proof.

$$\{\emptyset, \{\emptyset\}\} \in \mathcal{P}(\mathcal{P}(\mathcal{P}(S))) \iff \{\emptyset, \{\emptyset\}\} \subseteq \mathcal{P}(\mathcal{P}(S))$$

$$\{\emptyset\} \in \mathcal{P}(\mathcal{P}(S))$$

$$\emptyset \in \mathcal{P}(\mathcal{P}(S))$$

Prove that for any set S :

$$\{\emptyset, \{\emptyset\}\} \in \mathcal{P}(\mathcal{P}(\mathcal{P}(S)))$$

Proof.

$$\{\emptyset, \{\emptyset\}\} \in \mathcal{P}(\mathcal{P}(\mathcal{P}(S))) \iff \{\emptyset, \{\emptyset\}\} \subseteq \mathcal{P}(\mathcal{P}(S))$$

$$\{\emptyset\} \in \mathcal{P}(\mathcal{P}(S))$$

$$\emptyset \in \mathcal{P}(\mathcal{P}(S))$$

$$\iff \emptyset \subseteq \mathcal{P}(S)$$

Prove that for any set S :

$$\{\emptyset, \{\emptyset\}\} \in \mathcal{P}(\mathcal{P}(\mathcal{P}(S)))$$

Proof.

$$\{\emptyset, \{\emptyset\}\} \in \mathcal{P}(\mathcal{P}(\mathcal{P}(S))) \iff \{\emptyset, \{\emptyset\}\} \subseteq \mathcal{P}(\mathcal{P}(S))$$

$$\{\emptyset\} \in \mathcal{P}(\mathcal{P}(S))$$

$$\emptyset \in \mathcal{P}(\mathcal{P}(S)) \iff \{\emptyset\} \subseteq \mathcal{P}(S)$$

$$\iff \emptyset \subseteq \mathcal{P}(S)$$

Prove that for any set S :

$$\{\emptyset, \{\emptyset\}\} \in \mathcal{P}(\mathcal{P}(\mathcal{P}(S)))$$

Proof.

$$\{\emptyset, \{\emptyset\}\} \in \mathcal{P}(\mathcal{P}(\mathcal{P}(S))) \iff \{\emptyset, \{\emptyset\}\} \subseteq \mathcal{P}(\mathcal{P}(S))$$

$$\{\emptyset\} \in \mathcal{P}(\mathcal{P}(S))$$

$$\emptyset \in \mathcal{P}(\mathcal{P}(S)) \iff \{\emptyset\} \subseteq \mathcal{P}(S)$$

$$\iff \emptyset \subseteq \mathcal{P}(S) \iff \emptyset \in \mathcal{P}(S)$$

Prove that for any set S :

$$\{\emptyset, \{\emptyset\}\} \in \mathcal{P}(\mathcal{P}(\mathcal{P}(S)))$$

Proof.

$$\{\emptyset, \{\emptyset\}\} \in \mathcal{P}(\mathcal{P}(\mathcal{P}(S))) \iff \{\emptyset, \{\emptyset\}\} \subseteq \mathcal{P}(\mathcal{P}(S))$$

$$\{\emptyset\} \in \mathcal{P}(\mathcal{P}(S))$$

$$\emptyset \in \mathcal{P}(\mathcal{P}(S)) \iff \{\emptyset\} \subseteq \mathcal{P}(S)$$

$$\iff \emptyset \subseteq \mathcal{P}(S) \iff \emptyset \in \mathcal{P}(S)$$

$$\iff \emptyset \subseteq S$$

UD Exercise 9.4

$$\mathcal{P}(A) \cap \mathcal{P}(B) = \mathcal{P}(A \cap B)$$

UD Exercise 9.4

$$\mathcal{P}(A) \cap \mathcal{P}(B) = \mathcal{P}(A \cap B)$$

Proof.

$$x \in \mathcal{P}(A) \cap \mathcal{P}(B)$$

UD Exercise 9.4

$$\mathcal{P}(A) \cap \mathcal{P}(B) = \mathcal{P}(A \cap B)$$

Proof.

$$\begin{aligned} x &\in \mathcal{P}(A) \cap \mathcal{P}(B) \\ \iff x &\in \mathcal{P}(A) \wedge x \in \mathcal{P}(B) \end{aligned}$$

UD Exercise 9.4

$$\mathcal{P}(A) \cap \mathcal{P}(B) = \mathcal{P}(A \cap B)$$

Proof.

$$\begin{aligned} x &\in \mathcal{P}(A) \cap \mathcal{P}(B) \\ \iff x &\in \mathcal{P}(A) \wedge x \in \mathcal{P}(B) \\ \iff x &\subseteq A \wedge x \subseteq B \end{aligned}$$

UD Exercise 9.4

$$\mathcal{P}(A) \cap \mathcal{P}(B) = \mathcal{P}(A \cap B)$$

Proof.

$$\begin{aligned} & x \in \mathcal{P}(A) \cap \mathcal{P}(B) \\ \iff & x \in \mathcal{P}(A) \wedge x \in \mathcal{P}(B) \\ \iff & x \subseteq A \wedge x \subseteq B \\ \iff & x \subseteq A \cap B \end{aligned}$$

UD Exercise 9.4

$$\mathcal{P}(A) \cap \mathcal{P}(B) = \mathcal{P}(A \cap B)$$

Proof.

$$\begin{aligned} & x \in \mathcal{P}(A) \cap \mathcal{P}(B) \\ \iff & x \in \mathcal{P}(A) \wedge x \in \mathcal{P}(B) \\ \iff & x \subseteq A \wedge x \subseteq B \\ \iff & x \subseteq A \cap B \\ \iff & x \in \mathcal{P}(A \cap B) \end{aligned}$$

UD Problem 9.9

$$\bigcap_{\alpha \in I} \mathcal{P}(A_\alpha) = \mathcal{P}\left(\bigcap_{\alpha \in I} A_\alpha\right)$$

Proof.

UD Problem 9.9

$$\bigcap_{\alpha \in I} \mathcal{P}(A_\alpha) = \mathcal{P}\left(\bigcap_{\alpha \in I} A_\alpha\right)$$

Proof.

$$x \in \bigcap_{\alpha \in I} \mathcal{P}(A_\alpha)$$

UD Problem 9.9

$$\bigcap_{\alpha \in I} \mathcal{P}(A_\alpha) = \mathcal{P}\left(\bigcap_{\alpha \in I} A_\alpha\right)$$

Proof.

$$\begin{aligned} x &\in \bigcap_{\alpha \in I} \mathcal{P}(A_\alpha) \\ \iff \forall \alpha \in I : x &\in \mathcal{P}(A_\alpha) \end{aligned}$$

UD Problem 9.9

$$\bigcap_{\alpha \in I} \mathcal{P}(A_\alpha) = \mathcal{P}\left(\bigcap_{\alpha \in I} A_\alpha\right)$$

Proof.

$$\begin{aligned} x &\in \bigcap_{\alpha \in I} \mathcal{P}(A_\alpha) \\ \iff \forall \alpha \in I : x &\in \mathcal{P}(A_\alpha) \\ \iff \forall \alpha \in I : x &\subseteq A_\alpha \end{aligned}$$

UD Problem 9.9

$$\bigcap_{\alpha \in I} \mathcal{P}(A_\alpha) = \mathcal{P}\left(\bigcap_{\alpha \in I} A_\alpha\right)$$

Proof.

$$\begin{aligned} x &\in \bigcap_{\alpha \in I} \mathcal{P}(A_\alpha) \\ \iff \forall \alpha \in I : x &\in \mathcal{P}(A_\alpha) \\ \iff \forall \alpha \in I : x &\subseteq A_\alpha \\ \iff x &\subseteq \bigcap_{\alpha \in I} A_\alpha \end{aligned}$$

UD Problem 9.9

$$\bigcap_{\alpha \in I} \mathcal{P}(A_\alpha) = \mathcal{P}\left(\bigcap_{\alpha \in I} A_\alpha\right)$$

Proof.

$$\begin{aligned} x &\in \bigcap_{\alpha \in I} \mathcal{P}(A_\alpha) \\ \iff \forall \alpha \in I : x &\in \mathcal{P}(A_\alpha) \\ \iff \forall \alpha \in I : x &\subseteq A_\alpha \\ \iff x &\subseteq \bigcap_{\alpha \in I} A_\alpha \\ \iff x &\in \mathcal{P}\left(\bigcap_{\alpha \in I} A_\alpha\right) \end{aligned}$$
