Theorem (Inverse of Composition (UD Theorem 16.6))

$$f:A \to B$$
  $g:B \to C$  are bijective

- (i)  $g \circ f$  is bijective
- (ii)  $(g \circ f)^{-1} = f^{-1} \circ g^{-1}$

Proof for (ii).

It suffices to check either one of the following identities:

$$(f^{-1} \circ g^{-1}) \circ (g \circ f) = I_A$$

$$(g \circ f) \circ (f^{-1} \circ g^{-1}) = I_C$$

$$f:A \to B$$
  $g:B \to A$ 

(iii) 
$$f \circ g = I_B \wedge g \circ f = I_A \implies g = f^{-1}$$

$$f: A \to B \quad g: B \to A$$

(iii) 
$$f \circ g = I_B \wedge g \circ f = I_A \implies g = f^{-1}$$

You need to check both identities.

$$f:A\to B\quad g:B\to A$$

(iii) 
$$f \circ g = I_B \wedge g \circ f = I_A \implies g = f^{-1}$$

You need to check **both** identities.

Theorem (UD Theorem 16.8)

$$f:A\to B \qquad g:B\to C$$

- (i) If  $g \circ f$  is surjective, then g is surjective.
- (ii) If  $g \circ f$  is injective, then f is injective.

$$f:A \to B \quad g:B \to A$$

(iii) 
$$f \circ g = I_B \wedge g \circ f = I_A \implies g = f^{-1}$$

You need to check both identities.

Theorem (UD Theorem 16.8)

$$f:A \to B$$
  $g:B \to C$ 

- (i) If  $g \circ f$  is surjective, then g is surjective.
- (ii) If  $g \circ f$  is injective, then f is injective.

First show that f is bijective, and then use Theorem 16.4.
